The invention relates to alkaline proceases produced by strains of Bacillus. The proceases ability to digest casein is not inhibited by cleid acid and they have a high stability to exidising agents. The cleid acid and they have a high stability to exidising agents. The is active over the pH range 4-13 and has at least 80% of its optimum active over the pH range 4-13, (b) after 30 minutes at 40 deg. C it is cable over the pH range 6-11; (b) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-FAGE. The alkaline proceases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to exidising agents allows the beaches. The present sequence represents an alkaline procease. (Updated to 20-MAR-2003 to correct DR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes novel Bacillus sp. alkaline proteases useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency (34 - 38%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease KP9866 from Bacillus sp strain XSM-KP9860 described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 NDVARGIVKADVAQSSYGLYGGGQIVAVADTGLDTGRNDSSMHEAFRGKITALYALGRTN

The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by cleid acid and they have a high stability to exidising agents. The cleid acid and they have a high stability to exidising agents. The is active over the prange 4-13 and has at least 80% of its optimum active over the pH range 4-13 and has at least 80% of its optimum at a table over the pH range 6-11; (b) after 30 minutes at 40 deg. Cit is cable over the pH range 6-11; (c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43.000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to exidising agents allows the beaches. The present sequence repairs of washing compositions including bleaches. The present sequence results an alkaline proteases. (Updated on 20-MAR-2003 to correct DR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NANDPNGHGTHVAGSVLGNGTSNKGMAPQANLVFQSVMDSNGGLGGLPSNVSTLFSQAYS 120

                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38$) compared to prior art alkaline proteases (31 and 23$). This sequence represents a fragment of the alkaline protease A-2 from Bacillus sp NCIB12513 described in the method of the invention
                                                                                                  300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                    This is the amino acid sequence of a novel protease of Bacillus sp. JP170 (NCIB 12513), as deduced from the nucleotide sequence of an isolated gene (see BAN82392). The entire protein, including the signal peptide and prepror region, has 77% identity to alkaline protease Y (see AAM89548) from Bacillus. The invention provides vectors, recombinant host cells and methods for the recombinant production of the protease The protease is used in laundry and dishwashing detergents, for institutional and industrial cleaning, and for leather processing, as well as for debittering and enhancing the degree of hydrolysis of protein hydrolysates, for flavour degree of hydrolysis of protein characters, for flavour development through hydrolysis of proteins can be considered stability towards oxidation under alkaline conditions, it has enhanced stability towards oxidation under alkaline conditions, to towards bleaching agents of the protease activity is diminished. Such provides mutant cells in which the protease activity is diminished. Such cells can be used for the production of heterologous recombinant proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         627

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        625
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to alkaline proceases produced by strains of Bacillus. The proceases ability to digest casein is not inhibited by obleic acid and they have a high stability to oxidising agents. The alkaline procease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the range pH 6-12; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11; (c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proceases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the enzyme to be an effective component of washing compositions including bleaches. The present sequence represents an alkaline protease of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              69

This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38$) compared to prior art alkaline proteases (31 and 23$). This sequence represents a fragment of the alkaline protease SD-521 from Bacillus sp strain SD-521 (FERM BP-11162) described in the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11; (c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the enzyme to be an effective component of washing compositions including bleaches. The present sequence represents an alkaline protease of the invention. The novel proteases have an increased detergency

This is the amino acid sequence of a Bacillus sp. alkaline protease Y detergency. It shows 77% identity to a newly isolated protease and improved detergency. It shows 77% identity to a newly isolated protease (see AAW89547) of Bacillus sp. UPIV (NCIB 12513). The invention provides vectors, recombinant host cells and methods for the recombinant production of such proteases. The protease are used in laundry and dishwashing detergents, for institutional and industrial cleaning, and for leather processing, as well as for debittering and enhancing the degree of hydrolysis of protein hydrolysates, for flavour development through hydrolysis of proteins, degradation of undesized peptides and in enzymatic synthesis of peptides. They have enhanced stability towards peroxy type. The invention also provides mutant cells in which the protease activity is diminished. Such cells can be used for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         89.6%; Score 2016.5; DB 2; Length 636; 88.0%; Pred. The sequence is that of alkali-protease Ya enzyme which can be used in the recombinant production of Ya enzyme. Ya enzyme is excellent in alkali resistance and surface active agent resistance and improves detergency

DNA coding alkali-protease Ya enzyme - has good alkali and surfactant resistance and improves detergency.

```
The present sequence represents the Bacillus lion Y protease. The invention claims for enzymes covalently modified on their surface by the attachment of a large number of small polymentic molecules, e.g. tatachment of a large number of small polymentic molecules, e.g. polyethylene glycols (PEG). The polymeric molecules are coupled to the N-terminal amino group and the amino groups of lysine residues found on the surface of the enzyme. In the example given, the lion Y protease was modified using methoxypolethyleneglycol (mPEG) as the polymeric molecule. The N-terminal amino group and the amino groups of the fourteen lysine residues present on the surface of the lion Y protease were modified. Modification of the enzymes increases the stability and/or reduces the sensitising potential (allergenicity) of the enzyme, without sensitising potential (allergenicity) of the enzyme, without relatively reducing enzymatic activity. Also, using a large number of relatively small polymeric molecules, rather than a few very large ones, provides a more even effect with reduced activity loss. The modified and hair care products, e.g. soaps, cosmetics, creams, gels, libsticks, hair gels, sun oils, shampoos, hair dyes, insect repellants, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 NASDPNGHGTHVAGSVLGNAL-NKGWAPQANLVFQSIMDSSGGLGGLPSNLNTLFSQAWN 119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Comment: This enzyme belongs to class I subtilisin-like family. It is a chelator-sens
C;Genetics:
alkaline serine proteinase (EC 3.4.-.-) I precursor - Alteromonas sp.
NiAlternate names: sutilase
C.Species: Alteromonas sp.
C.Species: Alteromonas sp.
C.Accession: JC4908
